Seal Storage Procedures

- Only designated, authorized employees should have access to seals. The fewer people who have access to seal(s), the better.
- Unauthorized employees must never handle container seals.
- Seals should be stored in a secure, locked location.
- When a seal is being selected for use on a container, the seal must be verified for integrity. Use the VVTT Seal Inspection Process.
- If unauthorized access has occurred with container seals, throw out the seals and inform management.
